INTELLIHIRE / FRONTEND DELIVERY SPECIFICATION

UI Completion Plan Modules 5-13

A detailed screen handoff for completing frontend UI before backend integration.

Purpose
Build and review complete portal screens using local sample data. After UI review, begin API integration module-by-module starting with Module 5.

Baseline: IntelliHire-FE/frontend (React 19, Vite, React Router, Zustand, Tailwind) and IntelliHire-FE/backend (Django REST Framework). This is UI-first; no API calls in scope.

Audit basis: routes, pages, stores, navigation, CSS tokens, screen specs, module READMEs/contracts. Status labels describe screen coverage, not integration.

01 / INVENTORY

What exists and what remains

You do not need to build every screen from zero. Reusable shells and several later-module screens exist; remaining work completes workflows and backend-shaped states.

Module	Status	Already built	Still needed
Module 5 Notifications	PARTIAL	Candidate bell/popover and candidate/company preference sections exist; admin computes local notices but has no bell. Mock/local only.	Reuse HeaderMenus.NotificationsPopover/settings. Add bell to CompanyLayout + AdminLayout. Sections: header bell/unread count; popover title + mark-all-read; role-scoped feed rows (category/title/body/time/destination); click marks read/navigates; empty state.
Module 6 CV Analysis / Shortlisting	PARTIAL	Company applicant tables show match score; candidate profile shows basic score summary. No job screening controls/detail.	Reuse candidate tables/filters, ScoreRing, ProgressBar, CompanyCandidateProfile. Build job analysis workspace: job/run summary; screening settings (auto-analysis, weights, threshold, auto-shortlist/invite); results table (component scores/flags/status); candidate detail (parsed skills, matched/missing, explanation); progress/retry/manual review; shortlist controls.
Module 7 Screening Interviews	PARTIAL / ADJACENT	Candidate setup/room/report are local practice screens. Employer invitation, queue, private invited-candidate room are missing.	Reuse focused room, transcript/report patterns, status badges, candidate profile. Build invite dialog; company queue; session detail/transcript; distinct token-based candidate room; screening report in candidate profile.
Module 8 Technical Interviews	MOSTLY MISSING	No independent screens; Module 8 plugs technical rules into Module 7.	Extend Module 7: technical invite fields/seniority; technical room variant; follow-up relationship/competency labels in transcript; technical relevance/report; outage/resume.
Module 9 Evaluation / HR Decisions	PARTIAL	Company profile has basic score ring/stage scores; no weighting/report/ranking/decision history.	Extend profile and job applicant view. Build evaluation summary/composite + missing-stage display; stage breakdown/weight settings; report/export; ranking/compare; HR decision panel and append-only history.
Module 10 Candidate Tracking	PARTIAL / ADJACENT	Candidate dashboard/reports are reusable, but no safe application timeline.	Add My Applications list; application timeline; interview invite/start/resume card; lost-link request; safe outcome view. Reuse CandidateLayout, badges, EmptyState, notification destinations.
Module 11 Mock Interviews	MOSTLY BUILT	Setup, room, report and history are substantial, but local browser data/question bank/deterministic scoring.	Keep InterviewSetup/Room/Report/CandidateReports. Add session limits/open-session state; feedback lifecycle; history retry/delete; progress/trends; CV-use states.
Module 12 Talent Communities	PARTIAL	Candidate discovery, company community, admin community exist with seeded data and local actions.	Reuse all three, communityStore/data, tables/drawers/dialogs. Complete company CRUD/archive/remove, eligibility filters, opt-in candidate search, members, requests, invitations, posts/responses; candidate invites/memberships/feed/leave; admin moderation.
Module 13 Platform Admin	PARTIAL	Dashboard/users/companies/communities/analytics/audit/settings shells exist; browser data.	Extend AdminLayout/settings/audit. Build health + alerts/acknowledge; moderation queue/detail/review/resolve; AI settings without secrets; prompt versions/history/rollback; usage; activity filters/CSV; reports/backup freshness.

Important distinction
Current candidate Interviews screens are local mock practice. Modules 7-8 need employer-managed invitations and a separate invited-candidate flow.

02 / EXISTING VISUAL SYSTEM

Palette and interface rules

Source: frontend/src/index.css and tailwind.config.js. Keep current brand treatment; neutral surfaces carry most content.

Token	Hex / value	Use
Brand	#F04E23	Primary action, focus, active nav
Hover	#D43D14	Hover/pressed
Soft	#FFF4F1	Selected surfaces/badges
Muted	#FCA68A	Secondary accent
Ink	#0D0D0D	Headings/strong text
Ink soft	#1A1A1A	Dark surfaces
Canvas	#FAFAF9	Workspace background
Surface	#FFFFFF	Cards/panels
Line	#ECEAE8	Separators
Strong border	#D1D5DB	Emphasis
Body	#374151	Body text
Muted text	#78716C / #9CA3AF	Metadata
Success	#059669 / #F0FDF4	Positive/completed
Warning	#D97706 / #FFFBEB	Pending/attention
Danger	#DC2626 / #FEF2F2	Failed/destructive

Typography: Fraunces/Georgia/Times for display headings; Inter/system sans for UI. **Shell:** 256px desktop sidebar, sticky top bar, mobile nav drawer, max content about 1280px. **Reuse:** PageHeader, Card, Badge, StatTile, ScoreRing, ProgressBar, Segmented, Toggle, EmptyState, DataTable, Tabs, Drawer, SearchField, ActionDialog. Lucide icons; accessible labels/tooltips; semantic status colors. Preserve existing spacing, rounded cards and restrained shadows.

MODULE 5 / PARTIAL

Notifications

Already built
Candidate bell/popover and candidate/company preference sections exist; admin computes local notices but has no bell. Mock/local only.

Reuse

Shared notification popover and settings sections.

Sections to build or complete

Reuse HeaderMenus.NotificationsPopover/settings. Add bell to CompanyLayout + AdminLayout. Sections: header bell/unread count; popover title + mark-all-read; role-scoped feed rows (category/title/body/time/destination); click marks read/navigates; empty state.

States and interaction requirements

Unread/read/mixed, zero unread, empty, long text, mobile. No inbox page needed initially. P0; use local fixtures.

UI-only boundary / priority
P0. Shared UI uses local fixtures; no Module 5 API calls.

UI sections checklist

Area	Build notes
1.	Reuse HeaderMenus.NotificationsPopover/settings. Add bell to CompanyLayout + AdminLayout. Sections: header bell/unread count
2.	popover title + mark-all-read
3.	role-scoped feed rows (category/title/body/time/destination)
4.	click marks read/navigates
5.	empty state.

MODULE 6 / PARTIAL

CV Analysis / Shortlisting

Already built
Company applicant tables show match score; candidate profile shows basic score summary. No job screening controls/detail.

Reuse

Candidate lists, score primitives, candidate profile.

Sections to build or complete

Reuse candidate tables/filters, ScoreRing, ProgressBar, CompanyCandidateProfile. Build job analysis workspace: job/run summary; screening settings (auto-analysis, weights, threshold, auto-shortlist/invite); results table (component scores/flags/status); candidate detail (parsed skills, matched/missing, explanation); progress/retry/manual review; shortlist controls.

States and interaction requirements

Queued/processing/completed/failed/manual-review/no readable CV/no applicants. Never show auto-rejection. P1; scoring stays backend-owned.

UI-only boundary / priority
P1. Mirror entities in fixtures; no client-side score calculation.

UI sections checklist

Area	Build notes
1.	Reuse candidate tables/filters, ScoreRing, ProgressBar, CompanyCandidateProfile. Build job analysis workspace: job/run summary
2.	screening settings (auto-analysis, weights, threshold, auto-shortlist/invite)
3.	results table (component scores/flags/status)
4.	candidate detail (parsed skills, matched/missing, explanation)
5.	progress/retry/manual review
6.	shortlist controls.

MODULE 7 / PARTIAL / ADJACENT

Screening Interviews

Already built
Candidate setup/room/report are local practice screens. Employer invitation, queue, private invited-candidate room are missing.

Reuse

Practice room/report visuals, company applicant context.

Sections to build or complete

Reuse focused room, transcript/report patterns, status badges, candidate profile. Build invite dialog; company queue; session detail/transcript; distinct token-based candidate room; screening report in candidate profile.

States and interaction requirements

Invited/active/interrupted-resumable/expired/completed/evaluation-pending/failed/cancelled; explicit AI outage and resume. P2; keep practice separate.

UI-only boundary / priority
P2. Distinguish private hiring interview from practice.

UI sections checklist

Area	Build notes
1.	Reuse focused room, transcript/report patterns, status badges, candidate profile. Build invite dialog
2.	company queue
3.	session detail/transcript
4.	distinct token-based candidate room
5.	screening report in candidate profile.

MODULE 8 / MOSTLY MISSING

Technical Interviews

Already built
No independent screens; Module 8 plugs technical rules into Module 7.

Reuse

Module 7 shared interview patterns.

Sections to build or complete

Extend Module 7: technical invite fields/seniority; technical room variant; follow-up relationship/competency labels in transcript; technical relevance/report; outage/resume.

States and interaction requirements

Blocked/invited/active/follow-up/outage/resumed/completed/report states. No parallel engine; blank recommendation stays blank. P2.

UI-only boundary / priority
P2. Variant within Module 7; no separate engine.

UI sections checklist

Area	Build notes
1.	Extend Module 7: technical invite fields/seniority
2.	technical room variant
3.	follow-up relationship/competency labels in transcript
4.	technical relevance/report
5.	outage/resume.

MODULE 9 / PARTIAL

Evaluation / HR Decisions

Already built
Company profile has basic score ring/stage scores; no weighting/report/ranking/decision history.

Reuse

Candidate profile, scores, tables, dialogs and export patterns.

Sections to build or complete

Extend profile and job applicant view. Build evaluation summary/composite + missing-stage display; stage breakdown/weight settings; report/export; ranking/compare; HR decision panel and append-only history.

States and interaction requirements

Missing is not zero; report none/generating/ready/failed; AI is advisory; confirm decision and preserve history. P3.

UI-only boundary / priority
P3. Mock actions locally; render decision history.

UI sections checklist

Area	Build notes
1.	Extend profile and job applicant view. Build evaluation summary/composite + missing-stage display
2.	stage breakdown/weight settings
3.	report/export
4.	ranking/compare
5.	HR decision panel and append-only history.

MODULE 10 / PARTIAL / ADJACENT

Candidate Tracking

Already built
Candidate dashboard/reports are reusable, but no safe application timeline.

Reuse

Candidate shell, dashboard cards, status badges.

Sections to build or complete

Add My Applications list; application timeline; interview invite/start/resume card; lost-link request; safe outcome view. Reuse CandidateLayout, badges, EmptyState, notification destinations.

States and interaction requirements

No applications, review, shortlisted, interview pending/expired/completed, decision. Hide HR notes/internal scores. P4.

UI-only boundary / priority
P4. Show only candidate-safe content.

UI sections checklist

Area	Build notes
1.	Add My Applications list
2.	application timeline
3.	interview invite/start/resume card
4.	lost-link request
5.	safe outcome view. Reuse CandidateLayout, badges, EmptyState, notification destinations.

MODULE 11 / MOSTLY BUILT

Mock Interviews

Already built
Setup, room, report and history are substantial, but local browser data/question bank/deterministic scoring.

Reuse

Existing setup, room, reports, history and microphone hooks.

Sections to build or complete

Keep InterviewSetup/Room/Report/CandidateReports. Add session limits/open-session state; feedback lifecycle; history retry/delete; progress/trends; CV-use states.

States and interaction requirements

Daily limit, open session, CV missing, incomplete/cancelled, partial/generating/ready/failed, deleted. UI only; LLM hook later. P1.

UI-only boundary / priority
P1. Close UI state gaps; do not implement real LLM behavior.

UI sections checklist

Area	Build notes
1.	Keep InterviewSetup/Room/Report/CandidateReports. Add session limits/open-session state
2.	feedback lifecycle
3.	history retry/delete
4.	progress/trends
5.	CV-use states.

MODULE 12 / PARTIAL

Talent Communities

Already built
Candidate discovery, company community, admin community exist with seeded data and local actions.

Reuse

Candidate/company/admin community pages and local store.

Sections to build or complete

Reuse all three, communityStore/data, tables/drawers/dialogs. Complete company CRUD/archive/remove, eligibility filters, opt-in candidate search, members, requests, invitations, posts/responses; candidate invites/memberships/feed/leave; admin moderation.

States and interaction requirements

Active/archived/removed, request/invite-only, ineligible reason, pending/expired invite, removed member, post delivery. Hide contact details. P3.

UI-only boundary / priority
P3. Mirror backend statuses; hide contact details.

UI sections checklist

Area	Build notes
1.	Reuse all three, communityStore/data, tables/drawers/dialogs. Complete company CRUD/archive/remove, eligibility filters, opt-in candidate search, members, requests, invitations, posts/responses
2.	candidate invites/memberships/feed/leave
3.	admin moderation.

MODULE 13 / PARTIAL

Platform Admin

Already built
Dashboard/users/companies/communities/analytics/audit/settings shells exist; browser data.

Reuse

Admin shell, pages, tables, filters, drawers, settings and audit.

Sections to build or complete

Extend AdminLayout/settings/audit. Build health + alerts/acknowledge; moderation queue/detail/review/resolve; AI settings without secrets; prompt versions/history/rollback; usage; activity filters/CSV; reports/backup freshness.

States and interaction requirements

Unavailable health, stale backup, no alerts, removed target, prompt validation/rollback, read-only audit. P4.

UI-only boundary / priority
P4. No keys/secrets in settings; audit is read-only.

UI sections checklist

Area	Build notes
1.	Extend AdminLayout/settings/audit. Build health + alerts/acknowledge
2.	moderation queue/detail/review/resolve
3.	AI settings without secrets
4.	prompt versions/history/rollback
5.	usage
6.	activity filters/CSV
7.	reports/backup freshness.

04 / BUILD ORDER AND ACCEPTANCE

Complete UI before integration

Order	Work package	Exit result
1	Module 5 notifications	Bell in all portals; role-aware feed/read/empty states.
2	Module 6 CV analysis	Job settings, results, progress, candidate detail, shortlist.
3	Modules 7-8 interviews	Employer invites, session lifecycle, technical variant, candidate flow.
4	Module 9 evaluation	Composite, report, compare/rank, HR decision history.
5	Modules 10-11 candidate journey	Application timeline and mock lifecycle/progress states.
6	Module 12 communities	Candidate/company/admin workflows complete.
7	Module 13 platform operations	Health, moderation, AI/prompts, usage, activity, reports/backups.
8	UI review then integration	Freeze screens; integrate starting with Module 5.

Completion gate

- Every screen is navigable from portal nav or a contextual action.
- Represent populated, empty, loading, recoverable error, blocked/ineligible and confirmation states.
- Role controls and candidate-safe data are correct.
- Responsive tables/dialogs/drawers/interview room show no overlap.
- Every visible control has local behavior; risky actions confirm.
- Fixture names/statuses mirror backend contracts.
- After UI review, replace mock providers with API integration module-by-module.

Out of scope for this document
API integration and the deferred Module 7 LLM hook merge. Build the screen states first; begin integration only after UI review, starting with Module 5.

Files reviewed: frontend App.jsx, portal layouts/nav, HeaderMenus, relevant candidate/company/admin pages and stores, index.css, Tailwind config and screen specs; backend route configuration, contracts and Module 5-13 READMEs. No project source was modified.
